Troubleshooting Tips

The latest version of this document can be found in our Document Manager @ SourceForge.

Error:

"Warning: Error uploading file. May have exceeded size requirements."

or

"[error] PHP Warning: Max file size of *xxx* bytes exceeded – file [UPLOAD_FILE_0] not saved in Unknown on line 0".

Solution:

The file uploaded exceeds "upload_max_filesize" in `php.ini`. Increase this to be greater than the size of the file you are uploading.

Error:

Uploading a file redirects you to the login page.

or

"[error] PHP Warning: POST Content−Length of *xxx* bytes exceeds the limit of *xxx* bytes in Unknown on line 0"

Solution:

The POST'd data exceeds "post_max_size" in `php.ini`. The FORM encoding used by the browser can significantly increase the file size, sometimes by more than double. Set this to at least 50% more then "upload_max_size".

Error:

My user's login cookie(s) have become corrupt.

Solution:

Either the value of **$key** or the encryption algorithm (See **$pref_ciphers**) has changed. Re−type the correct username & password and ensure that **Rememer Me** is checked, to save the new login cookie.

Error:

"Fatal error: Call to undefined function: mcrypt_module_open()"

Solution:

The mcrypt module is either not installed or is broken. Please take one of the following solutions:

- Recompile php4 with mcrypt support enabled.
- Dowload the latest version of WeebleFM (which at the time of this writing would be beta 2002−04−14). Verisons after 1.1 have an option to disable mcrypt.

Error:

"Warning: No algorithms found in module dir..."

Solution:

MCrypt is unable to find any encryption modules in the default path. Check the following settings:

- Check the value of `mcrypt.algorithms_dir=` in php.ini. This should be set to the directory where libmcrypt resides.
- The fucntion can be modified to explicitly state the directory. e.g. `mcrypt_list_algorithms ("/usr/local/lib/libmcrypt");` *[assuming that is where your mcrypt library resides.]*
- Dowload the latest version of WeebleFM (which at the time of this writing would be beta 2002−04−14). Verisons after 1.1 have an option to disable mcrypt.

Error:

The Back button on my browser takes me back to the login screen.

Solution:

This is, unfortunately, working as designed. Don't use the back button. If you're trying to go back to the previous directory, use the 'Up One Dir' link near the top of the file listing.
